

Virginians spend about \$1 billion annually on gambling, generating 600 million in revenue for the state. Current proposals for gambling expansion are expected to add another \$260 million in revenue.

As gambling expands in Virginia, it is crucial to consider the potential increase in gambling addiction and fund programs that prevent and treat problem gambling.

Funding should be allocated for:

- Prevention programs to help reduce the number of Virginians impacted by problem gambling
- Media campaigns to promote public awareness about the symptoms, risk factors, and resources for help for problem gambling
- Training for mental health professionals on how to assess and treat problem gamblers and their loved ones
- Funds to help pay for treatment for problem gamblers and/or their loved ones

Virginia Council on Problem Gambling Mission

The Virginia Council on Problem Gambling (VACPG) aims to increase public awareness of problem gambling, ensure the widespread availability of treatment for problem gamblers and their families, and to encourage research and programs for prevention and education.

The VACPG is an affiliate of the National Council on Problem Gambling. Its representatives serve on the NCPG Board of Directors, the Affiliates Committee, and many other NCPG committees.

We maintain a neutral stance on gambling.

ANNUAL REPORT AND RECOMMENDATIONS

President:
Carolyn E. Hawley, Ph.D., CRC

Calendar Year 2019

As gambling expands, an estimated 5-10% of adults in Virginia may experience a gambling problem

Last year, the Virginia Problem Gambling Helpline received 989 calls. Of those, 311 were from Virginia residents seeking help with problem gambling. Other calls were from help seekers from other states or those trying to reach the Virginia Lottery or a casino. Of those, 230 were provided educational and help materials on problem gambling, 219 were referred to Gamblers Anonymous, and 194 were referred to a counselor.

- The number of intakes has more than doubled since 2018.
- The number of callers citing slot machines or grey machines as their primary type of gambling has risen 183%.
- The number who cite casino style table games has risen 75%.

Note that due to a lack of state funding, problem gambling public awareness campaigns, outreach, and clinician training have been minimal. There are a limited number of out-patient counselors in Virginia who are trained to treat problem gamblers, and there is not a designated treatment fund. This means that few people are aware of the resources to help problem gamblers, and even when they call, helpline callers rarely receive treatment.

In the U.S., substance use disorders are about 3.8 times more common than gambling disorders, while public funding for substance abuse treatment is about 334 times greater than public funding for all problem gambling services (\$24.4 billion versus \$73.0 million, respectively).[†]

2016 Per Capita Allocation by U.S. States on Problem Gambling Services

2019 Call Data Virginia Council on Problem Gambling

The primary way callers learned about the helpline was through the phone number on the back of lottery tickets, the Virginia Council on Problem Gambling website, the Virginia Lottery website, and lottery retail locations.
